

Make a Boat that Rocks!

You will need:

- Paper circle/plate
- Paper triangles
- Collage materials
- Glue and tape
- Skewer or chopstick

Instructions

1. Make the sea: cut a paper plate in half and tape the two sides together along the curve, leaving a small hole for the tick at the bottom. Make waves by either cutting a wave shape along the top or collaging.
2. Make the boat: Cut a triangle for the sail and a triangle for the boat (you can cut the bottom off the

triangle for the boat if you like) and stick it close to the top of the skewer or chopstick using glue or tape. It is easier to fold it over the stick before gluing. Make sure there is enough stick left to poke it through the hole you left at the bottom of the sea.

- 3.** Wow! You can now make your boat rock by wiggling the stick back and forth at the bottom! Now you can go for a sail! Wheeeeeee!!
